

# search search strategies

---

## Use Keywords

### example

Math

Addition

Mathematics

Fractions

Equivalent

Basic facts

---

**Keywords will create better search results!**

1. Use a synonym of the word you are looking for...
2. Use a more detailed word or phrase
3. Use brand names or proper nouns
4. Use multiple words in your search (words work together)

**Keywords won't work if...**

1. You misspell the words you are searching for
2. You are not specific (just searching for math isn't enough)
3. You type in whole sentences or paragraphs
4. Don't plan out what you are searching for
5. You put the phrase words out of order
